

Map interpretation note

This map was developed specifically for the Wetland Vision Technical Document

Wetland Vision map of the potential for wet woodland habitat creation for England

This map describes a relative gradient from areas where suitable environmental conditions occur for the habitat (pale colours), through to those areas that could offer the greatest opportunity for wetland delivery (dark). The Wetland Vision suggests that the best wet woodland could be created in areas: i) based on existing BAP habitat resource; ii) statutory site and/or iii) nature reserve interest; iv) with a small urban floodplain; v) where re-created wetlands could provide alternative ecosystem services on agricultural land of lower productivity value. It is possible that wet woodland can be created in other areas, but local conditions will determine this entirely.
